

**SECURITY. SPEED. RELIABILITY.**

## Security Assessment and Consulting Services

Adaptive's Security Services are carefully designed to address your most important needs: securing your infrastructure and protecting your information assets.

When choosing a company to guide you through the complexities of security assessments, remediation services and policy creation, finding a trusted business partner can be your biggest challenge. The Adaptive team is comprised of the industry's most talented information security service experts – dedicated advisors who are committed to mitigating risk for your enterprise.

We offer a comprehensive suite of security assessment services and programs to protect you from today's sophisticated threats.

### The Adaptive Advantage

**People:** Seasoned professionals with recognized security certifications; experienced Security Officers, Programmers, Network Administrators, and System Administrators that understand the security challenges that you face.

**Process:** Well established, thorough, and consistent methodology; Standardized risk scoring system; Secure storage of all client information; Manual vulnerability verification to greatly reduce false positives.

**Results:** Detailed prioritized reports with precise remediation steps; Executive summaries suitable for delivery to senior management; Follow-up remediation scans insure the effectiveness

**Professional services. Trusted advisors.**

Since 1997, Adaptive Communications has dedicated itself to becoming the premier value-added reseller, designer, and installer of enterprise data networking and information security solutions in the Northeast.

## Security Assessment and Consulting Services

### Vulnerability Assessments

Adaptive's Vulnerability testing assumes that an enterprise is never truly safe; the fluidity of malicious threats means a safeguard employed today might be obsolete tomorrow. This philosophy has led us to provide solutions for immediate insight into areas that are critical to you—defending your organization against attacks before they begin.

We offer a comprehensive set of services designed to identify vulnerability in your organization's information security defenses. A detailed vulnerabilities report includes a complete list of internal and external vulnerabilities, ranking of vulnerabilities in an industry standard rating format, remediation's matrix, and detailed recommendations, and a detailed list of solutions for remediation. With the freedom to select a comprehensive assessment or choose services a la carte, Adaptive provides meaningful solutions to your company's specific needs.

### Penetration Testing Services

Adaptive Penetration Testing goes straight to the heart of your network's vulnerabilities. Conducted on internal as well as external resources, we evaluate the likelihood of potential attacks with a series of coordinated events utilizing both automated and manual tools. Although our attempts must be authorized, they incorporate genuine efforts to access your network, host, or application resources.

While our goal is to uncover weaknesses in your organization's information security defenses and validate your ability to detect and halt an attack, the Adaptive team is committed to protecting your valuable infrastructure against potential intruders.

### Custom Application Testing

A comprehensive Security Audit of your custom applications is a crucial first step toward determining if vulnerabilities from anonymous or privileged access are present. We'll identify common exploits that are becoming the most current methods of attack employed by attackers today. And because every customer's needs differ, Adaptive can offer a highly customized package based on an extensive and all-encompassing inspection of your current applications and your security objectives.

### Remediation Services

Assessment and remediation of vulnerabilities is critical for managing risk and protecting your corporate resources. Adaptive can help you detect, correct, and report on these important issues. Our team of experienced consultants will help you address vulnerabilities including software defects, configuration errors and unsecured or unnecessary services and we'll work with you to implement a program to address these issues on an ongoing basis.

New vulnerabilities are emerging daily. We can help you quickly reduce risk, ensure compliance and keep pace. Services include:

- Eliminate configuration errors
- Update system defaults and patch levels
- Ensure Policy Enforcement; audit for compliance to internal security policy
- Program and data tracing services

### Security Policy Analysis and Development

An effective security policy is an important part of your overall information security program. It defines your organization's rules and procedures for protecting critical information assets. A comprehensive and practical policy will promote the proper use and handling of sensitive data; outline legal and regulatory requirements for data protection; and reinforce the commitment to information security at the highest levels of your organization. The elements of our policy program include:

- An assessment of your environment and business processes
- Establishing rules for expected behavior of users and administrators
- Authorizing security personnel to monitor and investigate
- Defining and authorizing the consequences of violation
- Ensuring compliance with regulations and legislation
- Creating and executing a communications plan
- Security awareness training and program development
- Policy maintenance; regular review and update

Our team of consultants will review your current policy or create a new one for you.

***Our comprehensive security programs support your company's commitment to information security and help minimize risk to your business.***
